

ACCOUNTING & DATA QUALITY PORTFOLIO

Joyce M. Lusiola | Junior Data Quality Analyst — Blue Oak Consulting

ACCOUNTING EXPERIENCE → DATA QUALITY THINKING

Accounting and finance professional with 8+ years of practical experience across banking, cash management, reconciliations, payroll, financial reporting, statutory compliance, budgeting, internal controls and audit support. Recent work supporting a U.S.-based CPA firm has involved reviewing trial balances, investigating discrepancies, preparing journal entries, reconciling financial information and checking supporting documentation.

This portfolio distinguishes my actual professional experience from the illustrative Excel exercise included to demonstrate how I would approach a data-quality assignment. The exercise is fictional and is not presented as client or employer work.

RELEVANT PROFESSIONAL EXPERIENCE

Remote Accountant | Remote Raven — Client: U.S.-based CPA firm

- Reviewed trial balances and account activity and investigated discrepancies.
- Prepared reclassification and adjusting journal entries when account balances required correction.
- Performed detailed reconciliations of cash, receivables, prepaid assessments, reserve funds, interfund balances and other balance-sheet accounts.
- Traced issues to supporting documentation, prior-year workpapers and client records before proposing corrections.
- Prepared financial statements and notes and maintained supporting documentation using CCH ProSystem fx Engagement and CCH Axcess.
- Worked with senior reviewers to resolve review comments and accounting issues.

Senior Accountant | Seven Restaurants Ltd — Nairobi

- Managed banking, cash management, reconciliations, payroll, statutory compliance and financial reporting for a multi-branch business.
- Processed and monitored banking transactions and transfers and investigated reconciliation differences.
- Prepared management reports and supported budgeting and variance analysis.
- Maintained financial records and documentation for external audit and conducted internal checks of finance operations.
- Analysed operating costs, stock and wastage to support cost-control decisions.
- Worked with operational teams to improve the completeness and accuracy of information used for reporting.

WHAT I BRING TO A DATA QUALITY ROLE

- Strong attention to detail developed through reconciliations, financial statement preparation and audit support.
- Comfort working through high volumes of financial information and resolving exceptions systematically.
- Understanding of P&L, balance sheet, cash flow and the relationships between accounting records.
- Practical Excel use for organising, reconciling and analysing financial information.
- Experience with QuickBooks Online, Xero, Sage, Odoo, CCH Engagement and CCH Axcess.
- Ability to work independently in a remote environment while communicating issues clearly with reviewers and colleagues.

TOOLS & CREDENTIALS

- **Excel:** practical financial-data organisation, reconciliation checks, formulas, exception identification and analysis.
- **Systems:** QuickBooks Online, Xero, Sage, Odoo, CCH ProSystem fx Engagement and CCH Axcess.
- **Credentials:** CPA Finalist (KASNEB) | Xero Certified Professional | Certified QuickBooks Online Accountant | Sage Business Cloud Certified Accounting Adviser.

ACCOUNTING & DATA QUALITY PORTFOLIO

Joyce M. Lusiola | Junior Data Quality Analyst — Blue Oak Consulting

Illustrative Excel Data-Quality Exercise

This section is a deliberately small, fictional exercise. It demonstrates my approach to checking data rather than claiming prior employment as a Data Quality Analyst or consultant.

SAMPLE CHECK: REPORTED REVENUE VS. UNITS × PRICE

Record	Units	Unit Price	Reported Revenue	Recalculated	Result
A	100	50	5,000	5,000	PASS
B	125	50	6,250	6,250	PASS
C	150	50	7,500	7,500	PASS
D	150	55	7,500	8,250	REVIEW
E	200	50	—	10,000	REVIEW

HOW I WOULD HANDLE THE EXCEPTIONS

Record D: Reported revenue does not reconcile to units × unit price. I would trace the source transaction and confirm whether the price or revenue field is incorrect before using the record in analysis.

Record E: Revenue is missing. I would not invent a value in the source data. I would flag the record, trace the source and, if appropriate, calculate a separate derived field for analytical purposes.

Control principle: Preserve the original source, document exceptions, record the resolution and only use validated values for downstream conclusions.

MY DATA-QUALITY REVIEW FLOW

01	02	03	04	05	06	07	08
PRESERVE Keep source data unchanged.	VALIDATE Check completeness and logic.	RECONCILE Recalculate key fields.	FLAG Identify exceptions.	INVESTIGATE Trace to source evidence.	DOCUMENT Record resolution.	ANALYSE Use validated data.	COMMUNICATE Summarise findings.
